Learniva is an AI platform that creatively tailors math instruction to each student in real time – as if they had their own teacher.

Learniva is an AI platform for personalized math learning that brings creativity and individuality to learning. While most students get the same examples in school, Learniva adapts to each individual based on what they already know, where they make mistakes, and how quickly they learn.

The platform monitors the student's progress and creatively creates new tasks and explanations that build on each other in a logical way. In the first phase, it focuses, among other things, on preparation for the mathematics entrance exam in the Czech Republic.

Unlike static learning tools, Learniva dynamically generates examples, hints and explanations tailored to each student, bringing the experience of a personal tutor to life at a significantly lower cost.

The long-term ambition is to build a global infrastructure for personalized learning across subjects, enabling schools, institutions and other platforms to easily integrate adaptive learning into their systems.
