NABERIUS TECH

Software for instant generation of photorealistic 3D environments for simulation and autonomous systems.

NABERIUS TECH is a technology software company that develops advanced solutions for the automatic creation of realistic 3D digital environments. Its flagship product, **IRIS, uses** artificial intelligence and innovative rendering technology to instantly generate photorealistic virtual worlds with geolocation accuracy without lengthy manual processing. This enables the efficient creation of training data for autonomous systems simulations, visualizations for film, games or urban planning. One application of **IRIS is SERENITY –** an intuitive virtual reality without head-mounted displays, designed for clinical and wellness environments. Users can navigate through soothing environments using natural head movement, which promotes psychological well-being and reduces stress without the need for technical assistance from staff. **NABERIUS TECH combines** state-of-the-art technology with practical applications in healthcare, simulation, visualization and artificial intelligence to accelerate development, reduce costs and improve the user experience.
