A digital comics creation tool that combines animation, gameplay principles and AI – and changes the way comics are created and read.

PANEL is a digital comic creation tool that combines animation, gameplay principles and AI. It enables small teams and individuals to create new forms of storytelling at the intersection of comics, film and games. It builds on the visual grid and adds movement, interaction and AI to an otherwise static comic book form. The Panel aims to change the way comics are created and read, and define a new comics standard.
